

Sound setup

It is said that people can live with the video acting up a bit but they don't like it when the audio is bad.

To setup Audio in Webex there are several options:

From the "Quick Start" tab, in the Audio Connection choices you may "Connect using a computer" for audio. You can choose the microphone source as well as the speaker output. This is handy if you are say using a Jabra speaker system. The advantage of the Jabra is that it has echo cancelling electronics built in.

Another good option is the "Call me" feature. This is best used when you have a conference phone available. Enter the conference phone number, dial it, and answer the phone.

The choice to "I will call in" is for a remote person to join their audio with a phone.
