

Three Common Technologies

- Video Conferencing
- Web Conferencing
- Live Streaming

Video Conferencing

- Requires specialized hardware on both ends
- Typically designed for connecting two to three sites
- Provides high quality video and audio communications

Web Conferencing

- Uses an internet browser like Google Chrome
- Participants invited through email
- Scheduled start and end time
- Designed to connect 2 to 250 participants

Live Streaming

- Sharing via a hyperlink to the live event
- Open to many participants
- Hundreds of people may view

Which Method?

- Consider what technology is needed
- How you will reach participants
- How many people will attend
