

Video Camera Setup

For Participant to be able to see you in a Webex meeting, you need a video or webcam.

Many laptops have a webcam built-in.

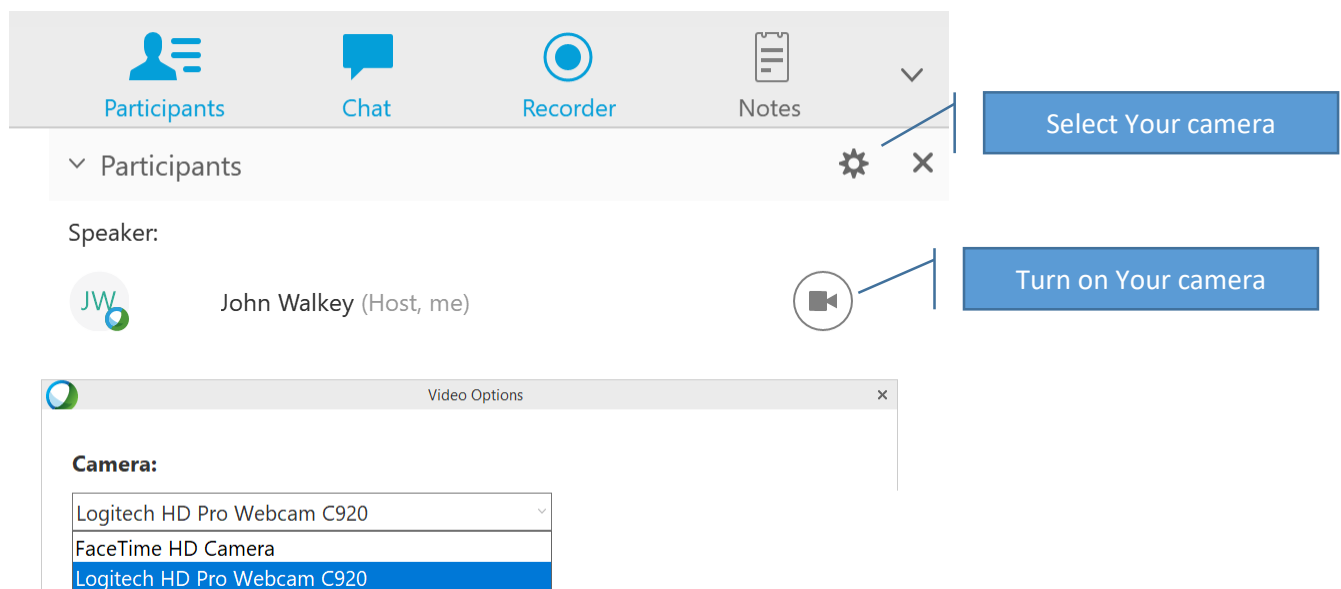

With desktop computers you would have to have an external webcam which typically plugin to a USB port.

The Logitech 920 models of webcams are a good choice as they capture HD video, have a microphone built-in, and they are “plug & play” for both Windows and Mac computers.

One issue that may arise is if you have two webcams’.

This can be set by clicking the gear option

You can turn on your camera by clicking the camera icon by your name in the participant’s panel.

Other people, and you, cannot control other people’s cameras for privacy reasons.
